

Everything's connected.

The office work environment is more complex than ever. Everything is connected by an ever-changing technological infrastructure. To address these "connectivity" needs, Management Alternatives provides services in three specific areas: Technology Consulting, Voice and Data Network Systems Relocation Management and Special Technical Systems Relocation.

Our breadth of technology-related offerings allows us to provide the strategic consulting solutions that meet both your short- and long-term objectives. It also enables us to plan and manage the specific elements of your system migrations and installations.

Management Alternatives' services include a survey of existing systems, LAN/WAN architecture, hardware, software and cable infrastructure procurement, management and coordination. We coordinate with all vendors for on-site installation and setup. Management Alternatives has successfully managed more than 300 projects, encompassing over 20 million square feet and involving SCIF, PBX, WITS and ISDN telephone systems. Our technology migration plans are highly detailed. And we address all appropriate contingencies to ensure minimal downtime and continuous operation.

Addressing and delivering uninterrupted connectivity is second nature to Management Alternatives. We have moved a major international airport. We have moved production studios, newsrooms, NASA digital tape libraries and radio stations. More than any competitor, we understand that the advantages of enhanced connectivity must be delivered without disruption to your employees and customers.

To learn more about how we have helped law firms, laboratories, technical facilities, not-for-profit organizations, the Federal government and corporations of all sizes, visit us online at <http://www.mgmt-alt.com> or contact us at (202) 842-4300 or sales@mgmt-alt.com.

We kept NPR "On Air."

When the assignment calls for relocating a radio station, you might consider several options. If the station's requirements dictate uninterrupted broadcasts to listeners worldwide, you call Management Alternatives. For National Public Radio, we ensured uninterrupted broadcasts to listeners in every corner of the globe—even as we moved them into a new headquarters facility. In specialty systems relocation (i.e., audio/engineering systems, routers, antennae, microwaves, satellite uplinks, television and radio broadcast studios, weather stations, airport operations towers and more), our expertise is unmatched.

T e c h n i c a l S y s t e m s

Management Alternatives helps you select the combination of services that best meets your needs. Any of our services may be commissioned as part of a turnkey project management package or selectively to complement your existing resources.

Our Technical Systems services include:

Technology Consulting—Management Alternatives consults with you to identify short- and long-term technology requirements, including telephone, data processing and cabling needs. We will recommend solutions, develop competitive RFPs for equipment and services, analyze RFP responses, recommend systems, negotiate contracts and coordinate systems installation.

Technology Systems Relocation Management—Management Alternatives experts develop strategic technology migration plans to provide for continuous operations, even as existing equipment is relocated. We plan, manage and execute your relocation, handling data centers, SCIF, Local and Wide Area Networks, PBX, WITS and ISDN telephone systems. Our services also include coordinating and facilitating the ordering and installation of standard telephone lines, long-distance data lines, high-speed network communications and modem and facsimile lines.

Specialty Technical Systems Relocation Management—Our experience with developing strategic relocation plans for specialty systems includes audio/engineering systems, routers, antennae, microwaves, satellite uplinks, television and radio broadcast studios, weather stations, airport operations towers and more.
